My research focuses on operating system security and program analysis (for C/C++). My research improves multiple program analysis and testing techniques (*e.g.*, **Fuzzing**, **LLMs for Security**, **Static Analysis**, **Symbolic Execution**), thereby combining the advantages of those techniques to systematically and automatically improve the security for real world software system (*e.g.*, **Linux kernel**, **Hongmeng kernel**, concurrent program). My research has led to multiple papers published in several prestigious conferences (*e.g.*, S&P, USENIX Security, CCS, NDSS, ICSE, FSE) and journal (*e.g.*, TSE). The open source tools attract interest from and applied in academia (*e.g.*, **CCS 2025 Distinguished Paper Award**), community (*e.g.*, Linux Security Summit) and industry (*e.g.*, Google Research Paper Rewards, Qualcomm Security Summit). Besides open source tools, I also report bugs and CVE for Linux kernel and contribute patches.
